

DR. RASHMI BHAMARE

Consultant - Obstetrician & Gynaecologist | Robotic & Advanced Laparoscopic Surgeon | IVF & Fertility Specialist

Qualification

MBBS | MS (OBGY) | DNB | FMAS | MRCOG (UK) | Diploma in Sexual and Reproductive Medicine (UK)

Overview

Dr. Rashmi Bhamare is an internationally trained across India, the UK and the USA, Obstetrician and Gynaecologist with over 17 years of experience, distinguished by her expertise in three critical pillars of women's healthcare: Robotic & Minimally Invasive Surgery - Advanced keyhole surgery with precision, expertise and a strong commitment to fertility preservation, High-Risk Pregnancy & Comprehensive Maternity Care - Proactive pregnancy care, prevention of avoidable complications and expert management of complex pregnancies, Fertility Enhancement & IVF - Natural conception whenever feasible, fertility-enhancing treatment when needed, and IVF when clinically indicated. With advanced triple-continent training, Dr. Bhamare integrates global clinical expertise with evidence-based Indian practice to deliver personalised, comprehensive care. Her surgical expertise spans advanced robotic, laparoscopic and hysteroscopic procedures, with a strong focus on precision, faster recovery and fertility preservation. In maternity care, she emphasises proactive risk assessment, prevention of avoidable complications, and meticulous management of complex

and high-risk pregnancies—supporting safer journeys for both mother and baby. As an IVF and reproductive medicine specialist, her philosophy is equally distinctive: IVF is not the first or only answer for every couple. She prioritises identifying and correcting underlying fertility barriers, restoring reproductive potential and enhancing the chances of natural conception wherever appropriate, while offering advanced assisted reproductive treatments when indicated. Combining surgical precision, high-risk obstetric expertise and a fertility-first approach, Dr. Bhamare is committed to delivering the right treatment, at the right time, with the least necessary intervention and the greatest possible focus on patient outcomes.
