

DR. UDAY KIRAN G

Consultant - Interventional Pulmonology

Qualification

MBBS | MD (Pulmonary Medicine)

Overview

Dr. Uday Kiran G is a meticulous and clinically driven pulmonologist in Vijayawada. He is currently practising as a Consultant – Pulmonary Medicine and Respiratory Sciences at Manipal Hospital Vijayawada, bringing several years of focused expertise in managing complex respiratory and sleep-related disorders across adult populations. His clinical practice is structured around comprehensive respiratory evaluation, long-term disease management, and interventional pulmonology. He routinely manages chronic airway conditions such as asthma and Chronic Obstructive Pulmonary Disease (COPD), tailoring treatment plans that combine pharmacological therapy, pulmonary rehabilitation strategies, and objective monitoring through Pulmonary Function Tests (PFT). Tuberculosis management remains a significant part of respiratory care in India, and Dr. Uday Kiran is experienced in evaluating drug-sensitive and complicated pulmonary tuberculosis cases. His work in this area emphasises early diagnosis, microbiological confirmation, structured treatment protocols, and follow-up monitoring to prevent relapse and long-term lung damage. In the domain of interstitial lung diseases (ILD), he focuses on differentiating

inflammatory from fibrotic patterns through clinical, radiological, and functional correlation, allowing for evidence-based therapy decisions. He is regarded as one of the best pulmonologists in Vijayawada who combines structured diagnosis, interventional skill, and long-term respiratory management principles. Sleep medicine is another key component of his expertise. He evaluates and manages sleep-disordered breathing, including obstructive sleep apnoea, through structured sleep assessments and polysomnography. His treatment plans incorporate CPAP titration, lifestyle counselling, and long-term follow-up to improve cardiovascular and metabolic outcomes associated with untreated sleep disorders. Within the respiratory critical care spectrum, he also manages acute exacerbations of COPD, severe asthma attacks, pneumonia, and respiratory failure with systematic evaluation and stabilisation protocols. Interventional pulmonology procedures form a critical extension of his practice. He performs bronchoscopy for diagnostic sampling, airway evaluation, and therapeutic interventions. Thoracoscopy is utilised in selected pleural disorders to aid diagnosis and management. ICD insertion for pleural effusions and pneumothorax is carried out with procedural precision and post-procedural monitoring. By combining clinical judgement with procedural capability, he ensures that patients receive both diagnostic clarity and timely intervention under one coordinated care pathway. Dr. Uday Kiran’s engagement with public health education is reflected in his discussions on long COVID, antibody therapies for high-risk patients, and evolving respiratory care strategies covered in regional media. These initiatives demonstrate his commitment to translating clinical knowledge into community awareness. His communication style remains measured and explanatory, especially when discussing chronic respiratory illness that requires sustained lifestyle modification and medication adherence. By combining diagnostic precision, procedural competence, and longitudinal follow-up, he ensures respiratory care that is clinically disciplined yet patient-centred. In the broader context of pulmonary medicine, being regarded among the

best pulmonologists in Vijayawada reflects not promotional language but consistency in outcomes, structured care pathways, and responsible respiratory practice.

Field of Expertise

- Asthma
- Chronic Obstructive Pulmonary Disease (COPD)
- Occupational Lung Diseases
- Smoking-related lung diseases
- Sleep Disordered Breathing
- Tuberculosis
- Lung Cancer
- Interstitial Lung Diseases
- Procedures :
- PFT (Pulmonary Function Test)
- Bronchoscopy
- Thoracoscopy
- Sleep Study (Polysomnography)
- ICD Insertion
