

## **DR. ADIL IQBAL**

Consultant - Surgical Oncology

### **Qualification**

MBBS | MS | Speciality Trainee and Clinical Fellow (Advanced Surgical Oncology) | Chief Senior Resident / Clinical Fellow (Colorectal Surgery and Anorectal Diseases)

### **Overview**

Dr. Adil Iqbal stands atop one of the most respected and considerate names in Surgical Oncology in Delhi, having been able to gain the trust of many due mainly to his unmatched surgical acumen. Dr. Iqbal, with considerable experience in a vast array of cancers, focuses mainly on those tumours affecting the gastrointestinal tract, breast, and thoracic regions. He carefully evaluates each patient's situation to design surgical plans that are both effective and tailored to their specific health needs. This patient-centred method ensures that the treatment is never standard but adapted to provide the greatest possibility of successful outcomes. Patients have almost always said that Dr. Iqbal breaks down difficult medical knowledge into simple, easy-to-understand explanations. He is infinitely accommodating in his dealings with patients, while also being pleasant, willing to alleviate their fears and help them through. Also, his casual conversations in both English and Hindi lend to the warmth that is felt in some quarters by patients from varied socio-cultural and linguistic backgrounds. At Manipal Hospitals in Delhi, Dr. Iqbal works in close collaboration with a

multidisciplinary team that includes medical oncologists, radiologists, pathologists, and supportive care experts. This team-based approach enables comprehensive treatment strategies that combine surgery with other therapies to fight cancer most effectively. With all his technical skills, in empathy, Dr. Iqbal treats the suffering of his patients. Cancer treatment, to him, is a very complex issue, not merely tumour removals, but a healing process for the person. He holds that respect and compassion are indeed extensions of his surgical skills. Dr. Adil Iqbal, a great Surgical Oncologist under whom you can be confident, would mean that the patient is provided with professional as well as empathetic care. With his support through the phases of cancer therapy, a patient can begin to look toward hope and trust.
